NORMAL FUNCTION OF THE IMMUNE SYSTEM

UK13071 | SINGLE BOTTLE (30 SERVINGS)

Why choose Isotonix Vitamin D3 with K2?

Isotonix Vitamin D3 with K2 contains vitamin D3, the metabolically active form of Vitamin D, along with Vitamin K2, which supports normal blood clotting and bone health. Isotonix Vitamin D3 with K2 is the first of its kind to combine both of these powerful vitamins with isotonic delivery, helping to maintain normal bones, muscle function and teeth. In addition, these vitamins work together to maintain the body's normal absorption of calcium and phosphorus, as well as contribute to the normal function of the immune system, and the process of cell division.

Vitamins D3 and K2 are paired together in Isotonix Vitamin D3 with K2, because they work synergistically to support normal bone health. Two of the more common forms of vitamin K are K1 and K2. While there are many similarities between these two forms of vitamin K, they can be distinguished by their important differences, the most significant being their differing pharmacokinetic properties. Vitamin K1 disappears rapidly from the blood, while vitamin K2 persists in the blood's circulation for a longer time.

The Isotonix Advantage!

Isotonix dietary supplements are delivered in an isotonic solution. This means that the body has less work to do in obtaining maximum absorption. Isotonic products allow nutrients to pass directly into the small intestine and be rapidly absorbed into the bloodstream. With Isotonix, little nutritive value is lost, making the absorption of nutrients highly efficient while delivering maximum results.

Isotonix products also offer the fastest and most efficient delivery system of all nutraceuticals supplements and are formulated using only the most advanced and scientifically proven ingredients. Isotonix products are completely free of binders and fillers common in traditional tablet and capsule products so you know that you are getting only the quality ingredients you expect.
