PROMOTE DELIVERY OF
HEALTHY LEVELS OF LDL

HEALTHY RATE OF
CHOLESTEROL PRODUCTION

HEALTHY SYNTHESIS OF
TRIGLYCERIDES IN THE LIVER

PRODUCT SKU: 13848 | 60 SERVINGS

Why Choose Heart Health Advanced Lipitrim Ultra?

With numerous heart health benefits including healthy cholesterol maintenance and promoting the accumulation of normal blood platelets, sytrinol is a pivotal ingredient in the quest for improved heart health. Studies have shown that in order to achieve maximum results with sytrinol, 300mg is the recommended dosage. While other products contain this ingredient, most contain only 150mg. In contrast, Heart Health Advanced Lipitrim Ultra contains 300mg, (twice the amount of other leading brands). This increased dosage helps promote healthy levels of LDL throughout the body while helping to maintain healthy cholesterol levels.

Why is LDL cholesterol considered bad?

When too much LDL cholesterol circulates in the blood, it can slowly build up in the inner walls of the arteries that feed the heart and brain. Together with other substances it can form plaque, a thick, hard deposit that can clog those arteries. If a clot forms and blocks a narrowed artery, it can cause serious heart problems.

What are triglycerides and how are they related to HDL and LDL?

A triglyceride is a form of fat. It comes from food and is also made in your body. People with high triglyceride levels often have high overall cholesterol, which is high LDL and low HDL cholesterol levels.

Product	Amount of Sytrinol per serving (in mg)
Heart Health™ Advanced Lipitrim Ultra	300mg
Leading Brand 1 - Life Extension® Sytrinol*	150mg
Leading Brand 2 - Natural Factors® Cholesterol Formula*	150mg
