

PUREH2O™ SHOWER FILTER

PROVIDES CLEAN,
REFRESHING SHOWER
WATER BY FILTERING THE
WATER BEFORE IT REACHES
YOUR BODY

Why Choose PureH2O™ Shower Filter?

The PureH2O Shower Filter comes complete with a two-stage filter cartridge that lasts six months or 10,000 gallons of filtered water. The PureH2O Shower Filter is an advanced filtering system that reduces chlorine and other chemicals for a healthier and more enjoyable shower experience. The high-capacity filter is easy to install and makes an attractive addition to any shower. Can be used with the hand-held PureH2O Shower Wand Attachment, available separately (Code: 14037). The Shower Filter uses a two-stage filtering process. Stage 1 filtration reduces chlorine from your shower water and balances its pH level with a natural copper/zinc mineral media called KDF-55D. The Stage 2 filtration reduces harmful volatile organic compounds (VOCs) that ordinarily vaporize while you are showering and are unhealthy to inhale. Using a carbonized coconut shell media, the second stage reduces most synthetic chemicals and VOCs.
