## Why Choose the Energy Booster Kit?

Having the energy to stay active and focused all day can sometimes be a challenge. As our lives become more hectic during work hours and beyond, we all fall victim to the effects of a busy lifestyle. The Energy Booster Kit is specifically designed to increase energy and help you stay alert without negative effects, such as crash or uncomfortable jitters. Whether you need to start your morning off right with MochaTonix®, need sustainable energy to get you through the day with Isotonix® Activated B-Complex or want a kick to stay active into the night with an Awake Energy Shot, the Energy Booster Kit has you covered.

## What does “Activated” refer to in Isotonix® Activated B-Complex?

Activated refers to the active forms of vitamins B6, B12 and folic acid. Using forms other than these activated forms requires that the vitamins be enzymatically activated prior to utilization by the body. Not only does this take time and energy within the body, there are circumstances in which this reaction is either slowed or inhibited.

## How long do the effects of Awake Energy Shot last?

Awake Energy Shot is designed to provide sustained energy, working primarily by promoting the body's own energy systems. The effects typically last for several hours, with a minimum of any “crash” effect afterward.

## What is MochaTonix®, and what will it do for me?

MochaTonix is a nutritionally balanced drink, using Advantra Z® to provide you with a pleasant burst of energy, increase your body's metabolism and heighten your energy, alertness and endurance levels. MochaTonix delivers essential nutrients to the brain to aid in the synthesis of noradrenalin, an important neurotransmitter, so you can feel more alert, concentrate better and think more clearly.

## Do any of these products contain caffeine?

Yes, MochaTonix and Awake Energy Shots contain caffeine.
