### Why Choose Isotonix Multivitamin with Iron?

Certain products are considered essential for everyone because they help establish a foundation for optimal health. One of these products is a multivitamin, since it is important for helping provide vitamins and minerals that may be lacking in our diet. When adding a multivitamin, it is important to realize that a multivitamin should be delivered in a way where little nutritive value is lost, making the absorption of nutrients important. It is this reason why Isotonix Multivitamin with Iron sets itself apart from the competition. In addition to providing 100% or more of the daily recommended value of many vitamins and minerals, Isotonix Multivitamin with Iron includes the rapid absorption made possible by the Isotonix delivery system, eliminating the need to swallow a pill. Also, by removing binders and fillers, Isotonix multivitamin is a great tasting, natural alternative to your everyday multivitamin.

### Why is taking a vitamin supplement important?

A vitamin may be broadly defined as a substance that is essential for the maintenance of normal metabolic function, but which is not produced in the body and, therefore, must be consumed from a source outside the body. They are necessary elements in the process of converting food to energy and in the growth and repair of body tissue. Reduction of vitamin levels over extended periods can result in vitamin deficiency. These shortages may lead to symptoms which can include loss of appetite, loss of body weight, increased irritability and sleeplessness or constant drowsiness. Deficiencies of this nature can be easily avoided by adequate vitamin intake.

### Who should take Isotonix Multivitamin with Iron?

Many people over the age of 18 would find it beneficial to enhance their diet with Isotonix Multivitamin with Iron. Even when eating a balanced diet, it is difficult to consume the optimal amounts of vitamins and minerals each day, including iron for some people. Numerous studies have been conducted on the importance of vitamins and minerals as well as the benefits of iron; this essential mineral helps carry oxygen in muscle tissue and promotes the formation of red blood cells. But not everyone needs additional iron in their diet. Whether you're choosing our Isotonix Multivitamin with Iron or without depends on your unique needs. One should supplement with a multivitamin to assure that their daily nutrient intake is balanced and powerful enough to ward against any deficiencies, allowing for the best health possible.
