PREBIOTICS

PRODUCT SKU: 6901 | 30 SERVINGS

Why Choose DNA Miracles™ Probiotics Extra?

As a parent, you want to be sure about the health of your infant. With DNA Miracles Probiotics Extra, you can rest easy knowing that you're providing your child one of the most complete children's probiotic and prebiotic formulas on the market today.

DNA Miracles Probiotics Extra provides your infant with a scientifically-formulated probiotic and prebiotic combination, as well as a healthy, safe serving of vitamin D. Each serving of DNA Miracles Probiotics Extra contains 200 million colony-forming units (CFUs) of probiotics with demonstrated beneficial effects for infants and newborns. DNA Miracles Probiotics Extra also provides 900 mg of prebiotics to support the normal growth and activity of healthy bacteria in the gut. Along with vitamin D, these three ingredients have a synergistic effect and reinforce some of the beneficial effects of breast milk.*

What are probiotics and why are they important for infants?

The gut microbiota plays an important role in human health by promoting a healthy bacterial balance, by exerting important metabolic functions (fermentation or nondigestible fiber, production of vitamin K), and by supporting the normal development of the immune system.*

What are prebiotics and why are they important for infants?

Prebiotics are indigestible components of breast milk, fruit and vegetables that support the growth and activity of healthy bacteria in the gut. They are distinct from probiotics, which are cultures of live bacteria.*

Why should I be concerned about gut health in my infant?

It is thought that bacteria lining the gut may play an important role in a child developing sensitivities to certain foods and allergens, regulating immune responses and determining how they will react to the same substances in later life.
