What is DNA Miracles Isotonix Multivitamin Plus?

Unlike traditional children's multivitamins, DNA Miracles Isotonix Multivitamin Plus was formulated to support the needs of children needing particular nutritional support in the areas of digestive, neurological and metabolic health.

Not only does DNA Miracles Isotonix Multivitamin Plus provide children with necessary nutrients needed to grow and stay healthy, but it provides a carefully selected blend of vitamins and minerals chosen for their exceptional bioavailability. This is important, as these ingredients are more rapidly absorbed and therefore better utilized by the body, giving your child the nutrients they need, when they need them.

What separates DNA Miracles Isotonix Multivitamin Plus from other children's multivitamins?

First, DNA Miracles Isotonix Multivitamin Plus is formulated using the Isotonix Delivery System, which allows for nutrients to be absorbed more rapidly into your child's system. This means less nutritional value is lost, and your child is getting a maximum benefit from this multivitamin.

Second, DNA Miracles Isotonix Multivitamin Plus has been specifically formulated to serve children in need of digestive, metabolic or neurological support. For many reasons, it is very important for such children to take a multivitamin. Children often have very particular tastes in food and are unlikely to eat a wide variety of items. It is crucial that children in need of digestive, metabolic or neurological support consume a specially-formulated multivitamin.

What is the serving size for DNA Miracles Isotonix Multivitamin Plus?

Children ages 2-3 should take one (1) level capful mixed with two ounces (2 oz.) of water twice daily (once in the morning and once in the afternoon) or as directed by your healthcare provider. Children ages four and up should take two (2) level capfuls mixed with four ounces (4 oz.) of water twice daily (once in the morning and once in the afternoon) or as directed by your healthcare provider.
