Why Choose DNA Miracles™ Isotonix® Multivitamin?

DNA Miracles™ Isotonix® Multivitamin provides your children with 100 percent or more of 13 essential vitamins and minerals (more than some leading commercial children's multivitamins), as well as beneficial phytonutrients your children need to help their growing bodies remain healthy and strong.*

We've also included a special blend of probiotics – LactoSpore – that has been shown to support digestion, support the absorption of nutrients by the body and support your child's immune system.

What separates DNA Miracles Isotonix Multivitamin from other children's multivitamins?

First, DNA Miracles Isotonix Multivitamin is formulated using the Isotonix Delivery System, which allows for nutrients to be absorbed more rapidly into your child's system. This means less nutritional value is lost, and your child is getting a maximum benefit from this multivitamin.

Second, special care has been taken in selecting the proper nutritional ingredients that go into DNA Miracles Isotonix Multivitamin. For example, the beta-carotene used in our formula contains other naturally-occurring carotenoids such as lutein and zeaxanthin, which are both proven to support healthy vision and promote healthy eyes. The vitamin E that is included in the formula is naturally occurring, and found to be the best source of vitamin E when working in coordination with support nutrients.*

Do kids like the taste of DNA Miracles Isotonix Multivitamin? Does DNA Miracles Isotonix Multivitamin contain sugar?

A single capful of DNA Miracles Isotonix Multivitamin contains only one gram of naturally-occurring sugars, which are blended with a delicious, natural Mandarin orange flavor. Not only does this low-sugar multivitamin taste great, but DNA Miracles Isotonix Multivitamin is a fun, easy-to-prepare powder that will have your kids looking forward to taking their vitamins every day.
