DIGESTIVE TRACT

PRODUCT SKU: 6937 | 90 SERVINGS

Why Choose DNA Miracles™ Isotonix® Digestive Enzymes?

DNA Miracles™ Isotonix® Digestive Enzymes promotes stomach comfort and bowel regularity in children by supporting the absorption of foods with a formula that works to split proteins during digestion, making them smaller and easier to digest. Not only does this promote normal digestion and absorption of nutrients, it also promotes bowel regularity.

In addition, DNA Miracles Isotonix Digestive Enzymes is formulated using the revolutionary Isotonix Delivery System. Combining the Isotonix Delivery System with an enhanced, patented enzyme blend that better tolerates stomach acids and supports the normal digestion of dairy and gluten, DNA Miracles Isotonix Digestive Enzymes presents a diversified formula designed for even the most challenging foods indulged in by children.

How does DNA Miracles Isotonix Digestive Enzymes compare with other enzyme formulas?

DNA Miracles Isotonix Digestive Enzymes contains DigeZyme®, which is designed to replenish essential digestive enzymes, supporting digestive health. It also contains protease enzymes that support the body's normal ability to break down proteins such as casein (dairy) and grains (gluten).*

What is DigeZyme®?

DigeZyme® is a multienzyme complex composed mainly of amylases (starch hydrolyzing enzymes), proteases (protein hydrolyzing enzymes) and lipases (lipid hydrolyzing enzymes). These digestive enzymes collectively support the breakdown of complex macromolecules into energy sources and promote the release of the nutrient content from the foods we eat. The digestive system naturally produces digestive enzymes. DigeZyme supplements the gastrointestinal tract with enzymes to adequately support the body's ability to digest food. In addition to the amylases, proteases, and lipases, DigeZyme contains two additional digestive enzymes including lactase (lactose hydrolyzing enzyme) and cellulase (cellulose hydrolyzing enzyme). DNA Miracles Isotonix Digestive Enzymes supports the absorption and utilization of important nutrients and provides enzymes that promote the absorption of nutrients, in children who need digestive support.*
