GREAT TASTE KIDS LOVE

SUPPORTS HEALTHY
DIGESTION

CONTAINS LIVEBAC®

PRODUCT SKU: 6940 | 30 SERVINGS

Why Choose DNA Miracles™ Chewable Probiotics?

Bacteria are naturally present within the body and are concentrated within the digestive tract. Both healthy bacteria (probiotics) and potentially unhealthy bacteria populate inside the digestive tract. Maintaining a balance of these two types of bacteria is essential to maintain optimal health.

DNA Miracles Chewable Probiotics contains five billion colony forming units from five carefully selected bacterial strains, and is formulated to help ensure your child receives the full benefits of the selected probiotics. Each probiotics strain used in DNA Miracles Chewable Probiotics has a unique, proven role to help support children's digestive health.

What is LiveBac®, and why is it important?

Probiotics are live microorganisms and must remain live while bottled and when ingested in order to be effective in the digestive tract. However, as sensitive organisms, many the probiotics in many products die off quickly when bottled. Furthermore, many probiotics die during the digestive process before reaching the large intestine because of the harshly acidic environment in the stomach. LiveBac is a patented technology which protects the bacteria to help ensure that they stay alive and protected so they are optimally functional in the digestive tract.
