WATER WHEREVER YOU GO

ECONOMICAL ALTERNATIVE
TO PURCHASING BOTTLED
WATER

BPA-FREE

PRODUCT SKU: 14046

Why Choose PureH2O Stainless Steel Water Bottle?

You're not only getting clean, refreshing, healthy, filtered water with the PureH2O Filtered Stainless Steel Water Bottle – you're being a responsible, environmentally-conscious consumer, reducing the need for plastic water bottles. Plus, you'll be saving hundreds of dollars using a water bottle with a filter compared to purchasing individual bottles of water from supermarkets and convenience stores.*

*Using the PureH2O Filtered Stainless Steel Water Bottle versus purchasing bottled water helps to reduce the waste in landfills generated from plastic.

What is BPA? And why are people concerned about it?

BPA stands for Bisphenol-A, a contaminant found in most plastics. BPA can adversely affect your health if consumed at high levels. The PureH2O Filtered Stainless Steel Water Bottle does not contain BPA.

How do I clean my PureH2O Filtered Stainless Steel Water Bottle?

To clean the PureH2O Filtered Stainless Steel Water bottle, remove the filter cartridge and wash with warm soapy water.

Why is the PureH2O Filtered Stainless Steel Water Bottle made using stainless steel and not aluminum?

Stainless steel is stronger, hard and more scratch-resistant than aluminum. This makes the PureH2O Filtered Stainless Steel Water Bottle more durable. Also, stainless steel is a neutral metal and does not leach, while aluminum bottles require linings to prevent the metal from leaching into the water.
