GET CLEAN, SAFE WATER

PRODUCT SKU: 14045 | SINGLE FILTER

Why Choose PureH2O™ Filtered Stainless Steel Water Bottle Replacement Filter?

Make sure you're getting the cleanest water from your PureH2O Filtered Stainless Steel Water Bottle using the PureH2O Filtered Stainless Steel Water Bottle Replacement Filter.

Many municipal water systems don't completely remove all contaminants during their filtration process. In some instances, the water from your tap can wind up having a chlorine taste and odor, which remains after processing. The PureH2O filtration system has been specifically designed for municipal water, giving you great tasting filtered water wherever you go.

The unique design of the PureH2O Filtered Stainless Steel Water Bottle Replacement Filter reduces chlorine taste and odor, giving you cleaner, great tasting tap water. This water bottle filter replacement, specially-designed for the PureH2O Filtered Stainless Steel Water Bottle, will filter up to 80 gallons of water – approximately 400 refills per use.

How often do I have to replace the cartridges?

A PureH2O Filtered Stainless Steel Water Bottle cartridge filter should provide you with 80 gallons (approximately 400 refills) of cleaner water. For the best-tasting water, be sure to change your filter every 4 months, regardless of frequency of use.

What is BPA? And why are people concerned about it?

BPA stands for Bisphenol-A, a contaminant found in most plastics. BPA can adversely affect your health if consumed at high levels. The PureH2O Filtered Stainless Steel Water Bottle does not contain BPA.
