CONTROLLER & POWER
DRAIN CLEANER

ENZYMES BREAK DOWN
ORGANIC SEWAGE

PRODUCT SKU: C6521 | 946 ML

Why Choose GlobalCare™ SP7™ All-Purpose Degradation Controller & Odor Controller?

GlobalCare Super Power 7 is a powerful, but completely safe, all-purpose waste degrader and odor controller. Pour it down household or business drains to keep pipes unclogged, and to improve efficiency of septic tanks and clogged leaching fields. Hotels and restaurants use SP7 to clean grease traps, and keep drain lines clear. It is perfectly suited for RV, marine and portable toilet holding tanks. Farm and industrial organic wastes are biodegraded and unpleasant odors are eliminated. SP7 liquefies and digests organic wastes without using formaldehyde, acids/bases, or other toxic chemicals which are prevalent in most commercial products.

Can SP7 be used in a composting toilet, such as the Clive Munstrom system?

Yes, it can. First, dilute SP7 at a ratio 3-4:1 gallon of water. Spray this solution on the compostable material prior to mixing it with human waste. Can SP7 be used to eliminate the odors and waste from hog farms, chicken farms, or other large livestock locations? SP7 can eliminate odors and assist in the degradation of waste. It is better used on a small scale, such as within your home. This is not to say that it cannot be used in larger applications, but it has a slow degradation rate. Several variables need to be taken into consideration, such as the size of farm, amount of waste entering lagoons and how often the waste enters the holding tanks
