CONCENTRATED SOLUTION
OF NATURALLY FERMENTED
ENZYMES THAT EFFECTIVELY
DECOMPOSE COMPLEX
ORGANIC MATERIAL IN SOIL
TO SIMPLE NUTRIENTS

PRODUCT SKU: 6519 | 2 - 32 OZ. BOTTLES

PRODUCT SKU: 6520 | 1 - 5 GALLON
CONTAINER

Why Choose GlobalCare Lawn Power?

Lawn Power is a safe, non-toxic concentrated solution of naturally fermented enzymes which help decompose complex organic material in soil to simple nutrients that plants can use. Urea nitrogen is also included in the formulation to encourage beautiful, green, thick and uniform grass growth. Lawn Power helps loosen the soil, making vital nutrients and trace elements available to the grass root system, allowing healthier development of the root system. Lawns treated with specific concentrations of Lawn Power formula display an increase in healthy lawn growth without the need for adding other chemical products such as fertilizers.

What time of year is best to do the initial application?

Initial application can be made at any time during the spring, summer or fall.

Are there advantages to using an organic fertilizer (fish, chicken, manure, etc.) versus a chemical fertilizer?

Organic fertilizers are superior to chemical fertilizers but less is required if using Lawn Power.
