

FRICION FREE 3000™ ENGINE TREATMENT

INCREASES GAS MILEAGE

BETTER ENGINE PERFORMANCE

INCREASES ENGINE LIFE

PRODUCT SKU: 6530 | 8 OZ.

Why Choose Friction Free 3000™ Engine Treatment?

Friction Free 3000™ Engine Treatment is an engine oil additive lubricant made of soft ductile metals, uniform and spherical in shape, ranging from 5 to 15 microns in size. These soft metals are coupled with special suspension agents to provide a solid boundary lubrication that can provide enhanced engine performance even under extreme conditions. Friction Free 3000 Engine Treatment has been shown to provide superior engine lubrication, improve engine power, increase fuel economy, reduce emissions and reduce engine surface wear. And it's so easy! It only takes 15 seconds to add a bottle of Friction Free 3000 Engine Treatment to your car's oil. Do this after each oil change for best results.

What can I expect by adding Friction Free 3000 Engine Treatment to my engine oil?

The Friction Free 3000 Engine Treatment micro-metallic formulation can translate into a smoother running engine. Lower operating temperatures, better fuel economy and reduced oil consumption are just a few of the added benefits reported to us by our customers. Because of the plating and more efficient combustion, exhaust gas emissions are also lowered. This means a cleaner and healthier environment for everyone.

Product	Increase Gas Mileage	Prevents Dry Starts	Reduces Oil Consumption	Reduces Exhaust Emissions	Repair Engine Wear	Protect Against Engine Wear
