VITA SHIELD®

Cellular Repair Therapy

BENEFITS

FAQ'S

BENEFITS

- Supports healthy skin collagen
- Promotes softer-feeling and smoother-looking skin
- Delivers more active vitamin C to the skin than when taken orally

FAQ'S

How do I use VitaShield Vitamin C Intensive Treatment?

Apply a dime-sized amount of product on freshly cleansed face and neck. Allow the treatment to completely absorb prior to the application of other products.

When do you recommend using VitaShield Vitamin C Intensive Treatment?

We recommend using VitaShield Vitamin C Intensive Treatment once daily, at night, as part of the treatment step.

Can I use VitaShield Vitamin C Intensive Treatment along with VitaShield OPC-3® Triple Serum?

Absolutely! The vitamin C in VitaShield OPC-3 Triple Serum is designed to penetrate quickly into the skin whereas; the vitamin C contained in VitaShield Vitamin C Intensive Treatment is in a non-aqueous base and provides sustained release into the skin. The combination of vitamin C in both products provides the most effective delivery for maximum vitamin C benefits.

Should you experience any temporary skin irritation due to the combined high levels of vitamin C, exclude the VitaShield OPC-3 Triple Serum in the morning. In the evening, use VitaShield OPC-3 Triple Serum, but omit VitaShield Vitamin C Intensive Treatment.

Why should I use antioxidants topically?

Antioxidants are effective in fighting the effects of free radicals, but when taken orally, antioxidants encounter the natural oxidation process that occurs in the body when free oxygen molecules interact with body tissue and other materials in the body. This process can prevent the benefits of oral antioxidants before they are able to reach the skin. Applying antioxidants topically ensures helps protect the skin from free radicals.
