

# Maintaining Cell & Cardiovascular Health With Isotonix Resveratrol

Scientists revealed the French paradox, which states that even though the French drink, smoke and eat high-fat foods, they have some of the lowest incidences of poor cardiovascular and cellular health. Scientists attribute this to the large amounts of red wine that the French consume or, more importantly, an extract found in red wine, resveratrol. Resveratrol is an ingredient with incredible clinical research, revealing it supports cardiovascular and normal cell health.

# 3

## Isotonix® Resveratrol contains three patented ingredients:

### **Resveravine® (containing 20% resveratrol extract): 10 mg**

A substantial amount of clinical research has revealed that Resveravine supports cardiovascular and normal cell health and has shown to be 100 to 300 times more concentrated in trans-resveratrol and may have a higher bioavailability than other isomers of resveratrol.

### **VitaBlue® Wild Blueberry Extract (12.5% anthocyanins): 50 mg**

Blueberries rank highest among many fruits and vegetables for ORAC activity and contain 25-30 different types of anthocyanins. VitaBlue Wild Blueberry Extract supports the body's COX-2 inhibitors and provides powerful antioxidants in much higher quantities than fresh blueberries, and shown to be effective in promoting cardiovascular health, contributing to normal cell cycle traverse, and maintaining overall cellular health.\*

### **BioVin® Advanced (French Red Wine Extract with 5% resveratrol): 200 mg**

Red wine extract containing oligomeric proanthocyanins (OPCs), known to be extremely effective in supporting cardiovascular health by supporting normal blood circulation, strengthening blood vessels and promoting normal platelet activity. BioVin Advanced provides OPCs and additional Resveratrol.

### **Did you know?**

- Resveratrol is a natural antioxidant in red wine. One would have to drink at least three bottles of red wine a day to experience the effects of resveratrol extract. Resveravine, which is a more concentrated form of resveratrol, ensures that the body reaps all of the benefits of resveratrol, without the ill effects from three bottles of wine.\*
- There is evidence that resveratrol may be a calorie restriction mimetic, a compound that mimics the effects of calorie restriction by targeting metabolic and stress response pathways affected by calorie restriction, but without restricting caloric intake, which may be helpful in promoting a longer lifespan.

### **Some benefits of Resveravine include:**

- Provides a higher level of free radical defense against oxidative stress.
- Stronger promotion of normal cellular activity.
- Higher antioxidant protection of LDL particles than pure resveratrol extract.
