

Kickstart your mornings and stay sharp all day.

Don't hit the wall. Awake® Energy Shot is a quick and effective way to stay alert and focused throughout the day. Its caffeine, B vitamins, amino acids and other nutrients provide lasting physical and mental energy without any calories or sugars. Unlike coffee and soft drinks, it supports your body's natural energy systems and promotes sustainable performance.

Vitamin B6 (Pyridoxine HCl)

Vitamin B6 is an essential co-factor for the production of energy and increases the body's resistance to fatigue. Vitamin B6 plays a key role in the production of amino acids, the building blocks of protein, and is used in the creation of DNA.

Vitamin B12 (Cyanocobalamin)

Vitamin B12 is important in the beta-oxidation of odd-numbered fatty acids, as well as the oxidation of the carbon skeletons of the amino acids methionine, threonine and isoleucine into succinyl CoA, which then enters the Krebs cycle to form GTP and ATP for energy to fuel biochemical reactions, working to facilitate the production of amino acids and the processing of carbohydrates into energy.

Vitamin B3 (Niacinamide)

Niacin is a water-soluble vitamin necessary for many aspects of health, growth and reproduction. Niacin supports the proper functioning of the digestive system, skin and nerves. It is also important for the conversion of food to energy and energy production.

N-Acetyl-Tyrosine

Tyrosine is an essential amino acid that the body cannot produce on its own, so it must be obtained from external sources, such as diet or supplementation. L-tyrosine is found naturally in all kinds of proteins. Dietary sources are primarily from animal and vegetable proteins. Vegetables and juices contain small amounts of the free amino acid.

Taurine

Taurine is an amino acid that is not incorporated into proteins and is found in high amounts in the brain, retina, myocardium, skeletal and smooth muscle, platelets and neutrophils. It is plentiful in the fluids of muscle, lung and nerve tissue.

Caffeine

Caffeine stimulates the central nervous system, promoting energy and restoring alertness. Caffeine's CNS stimulant effects are thought to improve alertness and psychomotor performance.

Glucuronolactone

Glucuronolactone is a substance found in the human body and is produced by the metabolism of glucose in the liver. It works to promote energy and has been reported to detoxify the body of impurities.

Available in orange and grape flavors, it's also convenient and portable for on-the-go use.
