

nutraMatrix[®] Ultra Prime Secretagogue

Research shows that hormone production is integral in maintaining optimal health. nutraMatrix[®] Ultra Prime[™] Secretagogue (HGH Enhancer) utilizes a special blend of nutrients to naturally support HGH production by the pituitary gland. As we age, HGH levels decline because the pituitary gland produces less. Our enhancer stimulates the pituitary gland naturally, increasing HGH levels.

L-Arginine Aspartate: 2.5 g, L-Arginine: 3 g. It supports various bodily processes, such as cell division, healing, immune function, and hormone secretion. L-arginine stimulates the pituitary gland and pancreatic release of hormones, including HGH and prolactin. It also aids in the production of nitric oxide (NO), which relaxes blood vessels (vasodilation).

How is Human Growth Factor different from HGH secretagogues?

HGH secretagogues stimulate the pituitary gland to release HGH, typically using amino acids and peptides. Human Growth Factors are proteins, vitamins, and botanicals that regulate cell and tissue functions in the body.
